SNOW PIT PROFILE CHART

Date General Area _						ſ	Eleva	tion		
Location of Pit							Aspect			
Weather (General Description & Temperature):							Slope Angle			
Any Observed Avalanche Activity (slabs, cracks, booming sounds, etc.):							STABILITY FORECAST			
Other Notes:	Rutschblock Score:						1- Stable (Green)2 - 50/50 (Yellow)3 - Very Unstable (Red)

<pre>/ / Partially Rounded (Branches, irregular</pre>										
• • • Rounded Grains										
Faceted Crystals (Sharp edges and corners, glassy smooth faces)										
Depth Hoar (Faceted, angular crystals with striations.)										
Rounding of Faceted Crystals										
VVV Surface Hoar (Striated - sometimes needle-like)										
OO Melt Freeze	-									
Ice Masses	-									
Free Water Symbols										
Dry Snow										
Moist - A snowball can be made bu water can not been seen when a hand lens is used										
Wet - A snowball can be made easily and water can be seen between grains										
Very Wet - Water can be pressed out of the ball										
Slush - Water runs out easily										
Shear Characteristics										
Q1 - Breaks clean and smooth like it's spring loaded Q2 - Breaks on a smooth plane but more stubborn, not										
like it's spring loaded Q3 - Breaks on a rough, broken plane										
Rutschblock Scores (RB)										N. Wallers -
RB1 - Slides during digging (Red Flag) RB2 - Slides with gentle step (Red Flag)										Idano
RB3 - Slides with knee compression (Red Flag)										
RB4 - Slides with one jump (Yellow Flag) RB5- Slides with two jumps (Yellow Flag) RB6 - Slides with repeated jumps (Green)	Cn		/or Tom	perature:						IV 2013 F
RB7 - Nothing produces smooth break (Green)	1 ⁵⁰		yei iem	iperature:						Nev.
